A Broker's Address Is Not a Production Floor

Apparel sourcing breaks down when the person quoting your order cannot answer for the cutting table, shade approval, or packing inspection. At 143-C, Small Industrial Estate, Eliveera's Fizan Shahzad leads a direct factory operation where archived CAD patterns, Pantone references, and AQL 2.5 inspection carry from a 30–50-piece pilot into larger replenishment. Accountability begins on the floor, not in a rented office.

"A small first order deserves the same pattern, shade reference, and inspection discipline as a full-season run." — Fizan Shahzad, CEO & Managing Director

EXECUTIVE LEADERSHIP
Fizan Shahzad

EXPORT CAMPUS
Sialkot 51310, Pakistan

OPENING MOQ
30–50 Pcs / Style

SAMPLE & BULK TIMING
7–10 Days Express / 3–4 Weeks FOB

SINGLE-CAMPUS ACCOUNTABILITY

Every prototype and bulk shipment is inspected against locked Pantone shade cards, GSM briefs, and graded CAD patterns before export packing.

Where Apparel Orders Slip—and How We Hold Them

International sportswear and apparel buyers rarely leave a supplier over pennies on FOB—they leave over vanished brokers, unpredictable shrinkage, sizing drift, and slow artwork revisions. Here is how our floor removes each bottleneck.

#	WHERE TRADITIONAL SOURCING FAILS	DIRECT FACTORY RESOLUTION & PROOF
01	**A Broker, Not a Factory** Traders can quote confidently, then outsource to an unknown workshop, leaving buyers without a responsible production contact when a shipment arrives wrong.	✓ 2-MIN LIVE FLOOR VIDEO Verify Eliveera at 143-C, Small Industrial Estate, Sialkot, then request an unannounced two-minute WhatsApp walkthrough from cutting through AQL 2.5 packing.
02	**Cash Tied in Untested Stock** High opening minimums can force brands to commit 500–1,000 pieces before a new colorway or fit has earned demand.	✓ 30–50 PCS PILOT Discuss a 30–50-piece founder pilot, with the same archived CAD pattern, Pantone shade reference, and AQL 2.5 discipline used for replenishment.
03	**Reorders That Change Shape** Uncontrolled fabric weights, shrinkage, crooked sublimation, and regional fit changes can turn a successful first order into a costly customer-service problem.	✓ ARCHIVED PATTERN & SHADE Specify GSM, locked Pantone references, and EU ISO 8559 or US ASTM D6240 size grading; retain the approved CAD pattern for repeat orders.
04	**Design Before You Can Quote** Brands may spend $400–$1,200 on freelance design and wait two weeks for a usable mockup and tech pack before seeking a factory quote.	✓ 0-FEE 3D TECH PACK Use the Free 3D Design Studio at any hour to create interactive garments and export production-ready mockups, Pantone codes, GSM BOM, and files.
05	**Season Starts, Shipment Doesn't** Unclear production ownership and unapproved repeat shades can push club deliveries past kickoff, when the sales window is already closing.	✓ AQL 2.5 INSPECTION Keep decisions tied to direct factory communication, approved Pantone references, archived CAD patterns, and AQL 2.5 inline inspection through packing.

Four Checks Before You Commit an Order

Book Live Floor Video Call ↗

01 — Confirm the Address
Check Eliveera's factory campus at 143-C, Small Industrial Estate, Khadim Ali Road, Sialkot 51310, Punjab, Pakistan.

02 — Call Without Notice
Request an unannounced two-minute WhatsApp video call and ask to see active production rather than a prepared presentation.

03 — Follow the Work
Ask to move from cutting tables to sublimation presses and four-needle, six-thread flatlock lines during the walkthrough.

04 — See the Inspection
Ask the team to show AQL 2.5 inspection and packing, then compare those controls with your approved order specifications.

Unannounced 2-Minute Live WhatsApp Walkthrough: Message Eliveera for an unannounced two-minute WhatsApp video walkthrough; we will take you from cutting tables through sublimation and stitching to AQL 2.5 packing. See the production floor directly, then discuss your garment, quantities, and specifications with the team responsible for the order.

A Free 3D Studio, Open Whenever Ideas Are Ready

Your team and your end clients can design garments in interactive 3D, 24/7, at their own convenience, with no subscription or designer fee. Export a Complete Production-Ready Tech Pack with 360-degree mockups, locked Pantone codes, GSM BOM, regional grading, and factory-ready print or CAD files, ready to take into sampling.

- ✓ 100% free for your team and clients, with zero licensing fees or agency bottlenecks.
- ✓ Export a Complete Tech Pack: 360-degree renders, Pantone locks, GSM BOM, and graded size chart.
- ✓ Approved 3D projects move directly to the factory floor for 7–10 day physical sampling.
- ✓ Your colorways, patterns, and logos stay confidential and are reserved strictly for your brand.

COMPLETE TECH PACK OUTPUT

01. High-res 360° front, back & side renders

02. Locked Pantone colorways & print placement

03. Bill of Materials (GSM, stitch & trims)

04. EU ISO 8559 / US ASTM D6240 size grading

05. Print-ready RIP SVG & ASTM D6673 DXF

The Hand of the Fabric, the Strength of the Seam

Fabric decisions begin with the weight in hand: from 320 GSM butter-soft activewear to 450–500 GSM combed French terry, each specification should suit the garment's purpose. Italian Kiian sublimation inks, controlled Pantone references, and four-needle, six-thread flatlock stitching bring color and seam construction into the same production conversation.

Italian Kiian Inks
Zero-bleed HD sublimation

4-Needle Flatlock
Chafe-free athletic seams

≤3% Shrinkage Cap
Pre-shrunk combed cottons

±1.0–1.5 cm Tolerance
Graded ASTM D6673 DXF

FABRIC ARCHITECTURE	WEIGHT / GSM	FIBER COMPOSITION	FINISHING & SEAMING	PRIMARY APPLICATION
Dry-Fit Interlock & Athletic Mesh	140–185 GSM	100% Polyester (Quick-Dry UV)	Zero-Fade Italian Sublimation, TPU Badges	Multi-Sport Uniforms & Pro Kits
Dynamic 4-Way Stretch Knit	220–260 GSM	85% Polyester / 15% Elastane	4-Needle Flatlock, Chafe-Free Seams	Gym Performance & Base Layers
Butter-Soft Squat-Proof Interlock	280–320 GSM	75% Nylon / 25% Spandex	Matte Peached Finish, Zero Transparency	Seamless Yoga & Luxury Athleisure
Heavyweight Loopback French Terry	430–500 GSM	100% Combed Ring-Spun Cotton	Enzyme/Pigment Wash, 3D Puff, Chenille	Cut-and-Sew Hoodies & Streetwear
Heavy Single Jersey Blanks	280–320 GSM	100% Combed Cotton (Pre-Shrunk)	Custom Pantone Reactive Dye, Woven Labels	Boxy Tees & Private-Label Capsules
Pro Cycling & Varsity Composite	220 GSM / 24oz	Aero Lycra / Melton Wool & Leather	120 kg/m³ Gel Chamois, Snap-Button Placket	Cycling Bibs & Collegiate Outerwear

Multi-Region Demographic Sizing (EU ISO 8559 · US ASTM D6240 · UK · Youth)

STANDARD / REGION	SIZE SCALE	CHEST RANGE (CM)	WAIST RANGE (CM)	FIT ARCHITECTURE & GRADING CONTROL
EU (ISO 8559 / EN 13402)	XS – 3XL	84 – 128	70 – 114	Athletic European cut; tapered waist & sculpted shoulder block
US (ASTM D6240)	XS – 4XL	86 – 142	71 – 127	Generous North American chest/sleeve ease & oversized drop-shoulder
UK & Commonwealth	XS – 3XL	86 – 132	72 – 116	Club-standard match jersey & rugby athletic proportion
Youth & Academy	116 – 164 cm	60 – 84	54 – 72	School & junior federation grading with reinforced collar seams

Tailored Production Tracks—From 30-Piece Pilots to Full Containers

Whether you are launching an independent activewear label, outfitting a multi-team academy, or consolidating a regional distributor catalog, the production floor adapts to your stage.

Emerging Labels & Founders

30–50 PCS / STYLE

Bottleneck Removed: Test a new fit or colorway without freezing cash in a 500–1,000-piece opening order before customer demand is clear.

What You Receive: A founder pilot with an archived CAD pattern, Pantone shade reference, AQL 2.5 discipline, and access to free 3D design.

Clubs, Academies & Schools

ZERO SETUP FEES

Bottleneck Removed: Avoid fragmented communication and uncertain sizing when kits must arrive ready for a club season or academy schedule.

What You Receive: Sublimated uniforms, tracksuits, and team accessories with regional size grading and direct contact with the factory team.

Regional Distributors & Importers

500–10,000+ PCS

Bottleneck Removed: Reduce repeat-order uncertainty across larger runs where shade drift, changing patterns, and unclear inspection ownership can erode trust.

What You Receive: Direct production coordination, retained CAD and Pantone references, and AQL 2.5 inline inspection across replenishment orders.

The Details Clubs Remember Between Seasons

01 Pilots With Production Discipline

A 30–50-piece founder pilot is handled with the same archived CAD pattern, Pantone shade reference, and AQL 2.5 discipline as a larger replenishment. That gives a young label room to test demand without treating its first customers as a trial run.

02 A Real Sialkot Address

Eliveera operates at 143-C, Small Industrial Estate, Khadim Ali Road, Sialkot—not behind a vague sourcing address. Buyers can speak directly with CEO and Managing Director Fizan Shahzad and request a live view of the production floor.

03 Built Around Material Decisions

The range spans sublimated teamwear, cycling apparel, compression, yoga, accessories, and 450–500 GSM French terry. Conversations can stay specific to garment use, fabric weight, print, fit, and construction rather than drifting into generic catalog talk.

04 Repeat References Kept Intact

Archived CAD patterns and approved Pantone references give repeat orders a clear starting point. Combined with AQL 2.5 inline inspection, they help keep fit, shade, and workmanship decisions visible as orders move from pilot to replenishment.

STAGE 01
Incoming Fabric Audit
GSM roll check, shade lot verification & shrinkage pull before cutting.

STAGE 02
Pre-Production Sample
Physical prototype shipped in 7–10 days for fit, trim & print sign-off.

STAGE 03
Inline Seam & Print QC
Real-time flatlock tension, sublimation alignment & badge placement audits.

STAGE 04
Final AQL 2.5 Packing
Dimension tolerances, moisture-barrier polybags & export carton manifest.
